PATHOLOGY REPORT

|                       |                                                  |
|-----------------------|--------------------------------------------------|
| Clinical Information. | Multiple cervical polyps with cervical erosions. |
| Nature of specimen.   | Biopsy                                           |

GROSS:

Soft tissue fragments collectively measured 1.7x1.5x0.6 cm.

MICROSCOPIC:

Polypoid lesions composed of hyperplastic endocervical mucous glands and Nabothian cysts, covered by focally ulcerated columnar endocervical epithelium with related areas of squamous metaplasia. Stroma is fibrotic and vascular and shows focal infiltration by inflammatory cells. No evidence of endometrial tissue . No evidence of atypia or malignancy.

DIAGNOSIS:

Cervical biopsy:

- Inflamed hyperplastic endocervical polyps with Nabothian cysts and squamous metaplasia.
- Negative for atypia.
