Referred By:	د/ حسن البعداني		Reported date:	2026-03-17	

PATHOLOGY REPORT

Clinical Information.	Mass located at the 12 o'clock position of the right breast.
Nature of specimen.	Excision biopsy

GROSS:

Circumscribed rubbery mass 1x1 cm showing homogenous white cut section and fatty tissue measures 3.8 x 2.8 x 2 cm.

MICROSCOPIC:

A benign well encapsulated tumor formed of proliferating breast ducts and stromal fibrocytes. The latter predominate in the lesion thus compressing ducts into slit-like structures. Submitted soft tissue showing breast tissue shows preserved normal lobular pattern with stromal fibrosis and adenosis. Cytologic features are unremarkable. No evidence of malignancy.

DIAGNOSIS:

Breast mass, excision biopsy:

- Intraductal fibroadenoma.
- Fibroadenosis
- Negative for malignancy.
