Pt. Age:	42 years.	Gender:	Female
Received date:		Reported date:	2026-03-16
Referred By:	د/ فؤاد الوصابي		

PATHOLOGY REPORT

Clinical Information.	Headaches and scalp swelling associated with a large, calcified left fronto-parietal extra-axial mass (described as an old hematoma or highly vascular abnormal bone growth attached to the dura) and a concurrent mild underlying subdural hematoma causing mild mass effect.
Nature of specimen.	Excision biopsy

GROSS:

Fragments of collective size 3.8x3x1 cm. Also received two bony fragments collectively measured 13x9x2.3 cm, totally embedded.

MICROSCOPIC:

A benign tumor formed of proliferating meningotheial cells with focal whorling. Cytoplasm is eosinophilic and abundant and cell borders are ill-defined. No evidence of atypia or malignancy. This is a WHO grade I meningioma

DIAGNOSIS:

Left fronto-parietal extra-axial mass:

- Meningotheial meningioma (WHO grade I).
