PATHOLOGY REPORT

Clinical Information.	Fungating and exophytic soft mass in the urinary bladder
Nature of specimen.	TUR

GROSS:

Soft tissue fragments collectively measured 2.2x2x0.5 cm, totally embedded.

MICROSCOPIC:

Papillary urothelial tumor formed of thin fibrovascular cores covered by multiple layers of malignant transitional epithelial cells of mild to moderate degree of anaplasia and mitosis. Lamina propria shows early infiltration. Muscularis propria is not included in submitted material; hence proper assessment of stage of tumor is not possible.

DIAGNOSIS:

Urinary bladder mass, TUR:

- Papillary transitional cell carcinoma, grade 2
- No muscles included in this biopsy to assess stage of disease.
