PATHOLOGY REPORT

Clinical Information.	Breast discharge.
Nature of specimen.	Exfoliative cytology

GROSS:

One smear was prepared and pap stained from 1 ml creamy fluid.

MICROSCOPIC:

The smears are highly cellular, showing a dense population of neutrophils and scattered foamy macrophages within a granular, proteinaceous background. No cohesive ductal epithelial clusters or cytologic atypia are identified. Features are consistent with acute inflammation.

DIAGNOSIS:

Breast discharge, conventional cytology:

- Category II; Benign; acute inflammatory changes consistent with acute mastitis/abscess.
- Negative for malignant cells.
