PATHOLOGY REPORT

Clinical Information.	Brain tumor with associated hydrocephalus.
Nature of specimen.	CSF for cytology examination.

GROSS:

One smear was prepared and stained from submitted 3 ml colorless fluid.

MICROSCOPIC:

Smear is cellular showing a population of small, atypical cells arranged individually and in loose clusters. These cells exhibit high nuclear-to-cytoplasmic ratios, scant cytoplasm, and hyperchromatic nuclei. Focal nuclear molding and occasional angulated/elongated nuclear forms are observed. The background contains amorphous proteinaceous material and rare mature lymphocytes.

DIAGNOSIS:

Cerebrospinal Fluid (CSF), Cytology:

- Positive for Malignant Cells; consistent with Small Round Blue Cell Tumor (SRBCT).
- For definitive typing, biopsy from any detected lesion is recommended.
