PATHOLOGY REPORT

Clinical Information.	Suspected hydatid cyst.
Nature of specimen.	Cystectomy

GROSS:

Received opened into three fragments of the cyst wall measured collectively 3.5x3x0.8 cm, totally embedded.

MICROSCOPIC:

Cyst wall shows an inner laminated eosinophilic capsule (endocyst) surround by a thin fibrotic ectocyst. The endocyst shows many daughter scoleces showing the characteristic hexacanth embryos of Echinococcus granulosus. Picture is consistent with hydatid cyst. No evidence of malignancy.

DIAGNOSIS:

Cystectomy:

- Hydatid cyst.
- Negative for malignancy.
