PATHOLOGY REPORT

Clinical Information.	Total abdominal hysterectomy and Rt. salpingoophorectomy.
Nature of specimen.	Total abdominal hysterectomy and Rt. salpingoophorectomy

GROSS:

Total abdominal hysterectomy and bilateral salpingoophorectomy: uterus measured $9.5 \times 7 \times 5$ cm, cervix measuring 3 cm in length. On sectioning, the myometrial wall thickness was 2.5 cm. The endometrium measured 0.7 cm. The uterus showed a grey area, suspected to be a fibroid, measuring 1 cm. The right ovary and fallopian tube measured

MICROSCOPIC:

Endometrium is hyperplastic and non-secretory. It is formed of moderately branching glands separated by cellular stroma and lined by 1-2 layers of cells. No evidence of complex glandular pattern. Islands of these endometrial glands and stroma are seen entrapped deep within myometrium. Rt. ovary and Fallopian tube are unremarkable. No evidence of atypia or malignancy.

DIAGNOSIS:

Total hysterectomy with unilateral salpingo-oophorectomy:

- Moderate simple endometrial hyperplasia.
- Deep adenomyosis.
- Cervical Nabothian cyst with mild endocervicitis with squamous metaplasia.
- Ovary and fallopian tube are unremarkable.
- Negative for atypia and malignancy.
