PATHOLOGY REPORT

Clinical Information.	Cervical polyp.
Nature of specimen.	Polypectomy

GROSS:

Soft tissue fragment measured 1x0.6x0.3 cm, totally embedded.

MICROSCOPIC:

Polypoid lesion composed of hyperplastic endocervical mucous glands and Naphthian cysts, covered by partially ulcerated columnar endocervical epithelium. Stroma is fibrotic and vascular and shows moderate infiltration by inflammatory cells. No evidence of atypia or malignancy.

DIAGNOSIS:

Cervical polypectomy:

- Inflamed hyperplastic endocervical polyp with Naphthian cysts.
- Negative for atypia.
